

Change your Device Lock

To change your password, go to the **Settings** app.

Select the **Lock Screen** option.

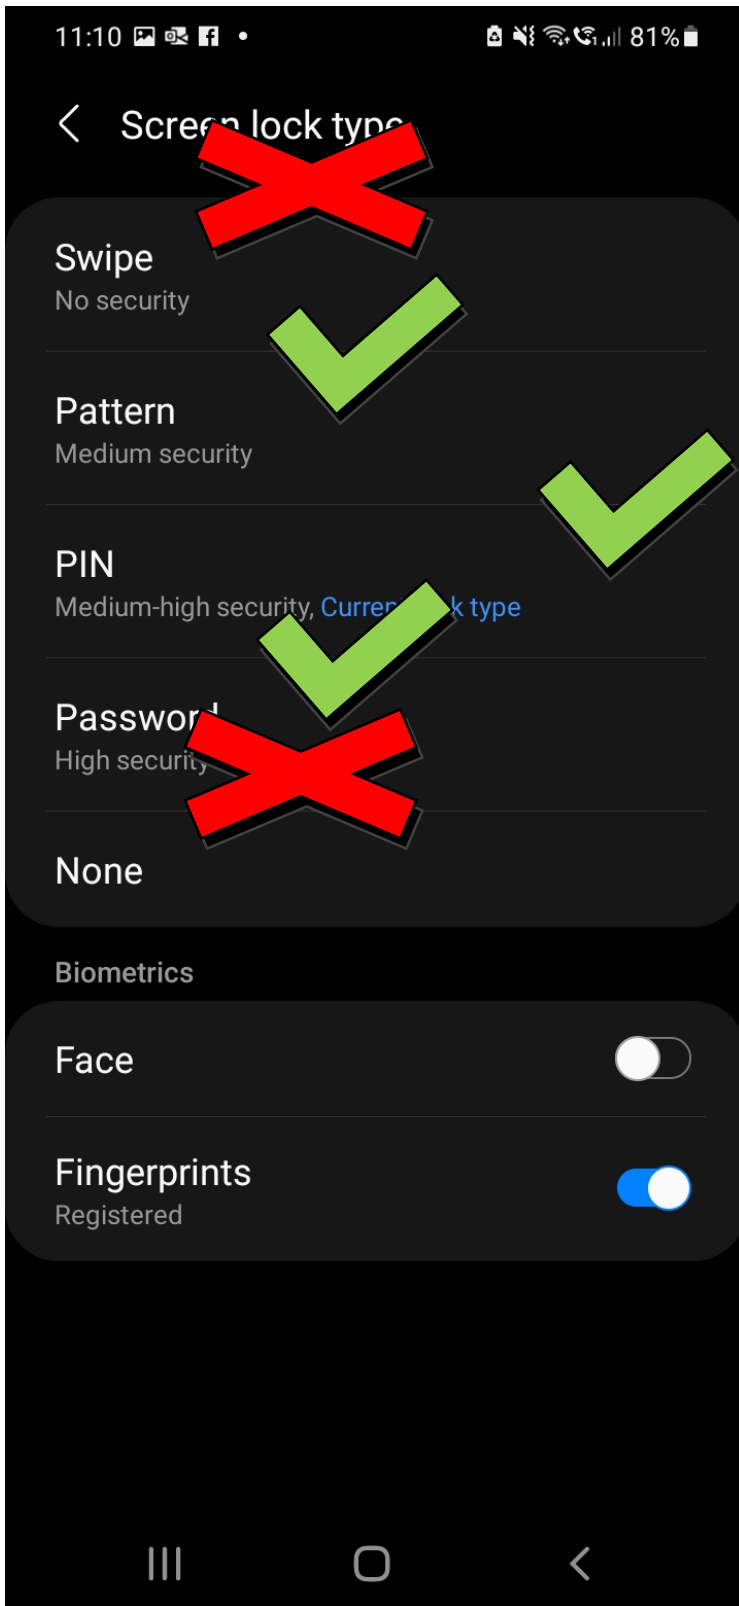

Select '**Screen Lock Type**'.

The blue text underneath shows what method you currently have to unlock your device.

Your device will then ask you to input your **current method** of unlocking your device.

This is to stop anyone who gets a hold of your device from locking you out of it.

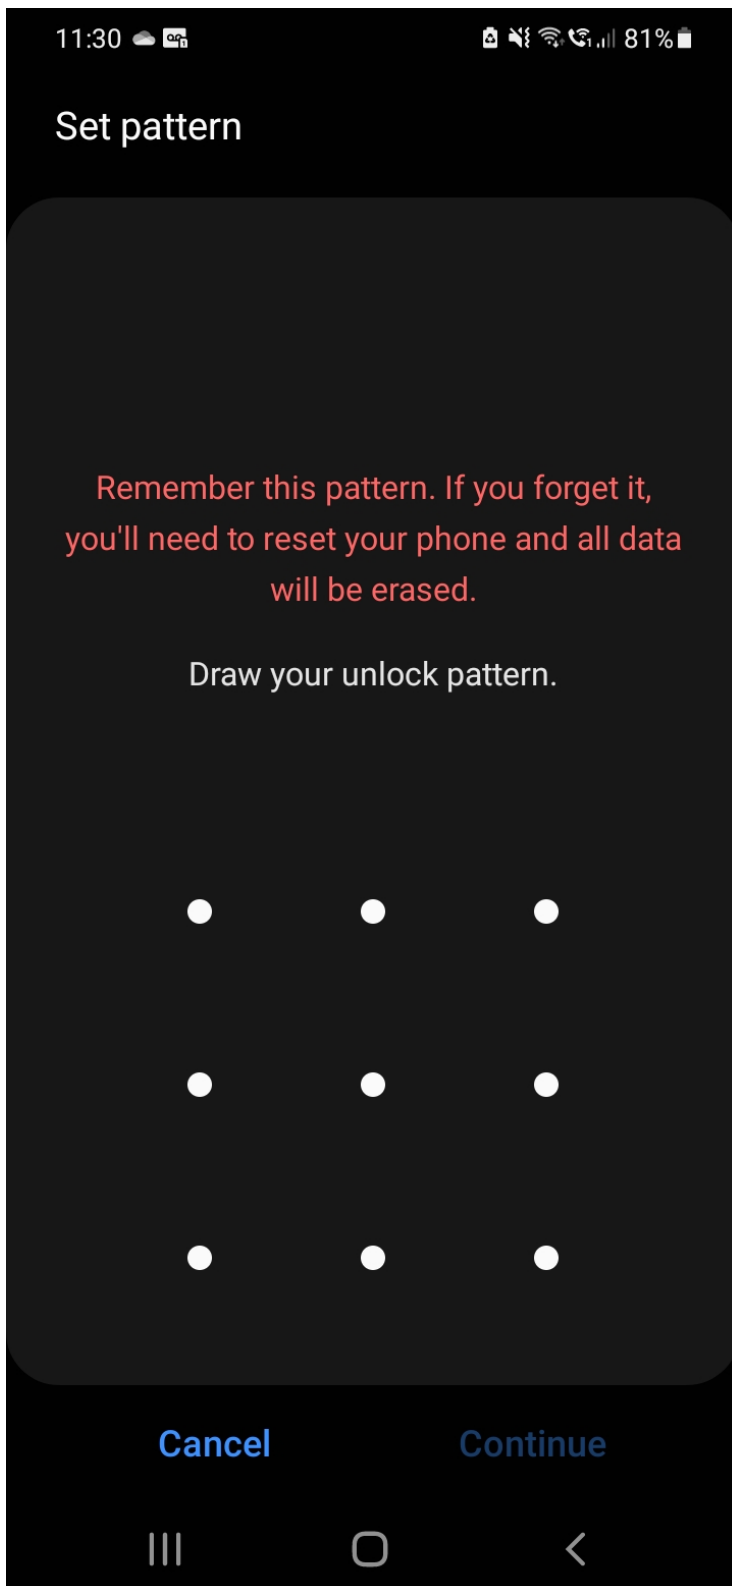

Step 4:

Choose a new lock option.

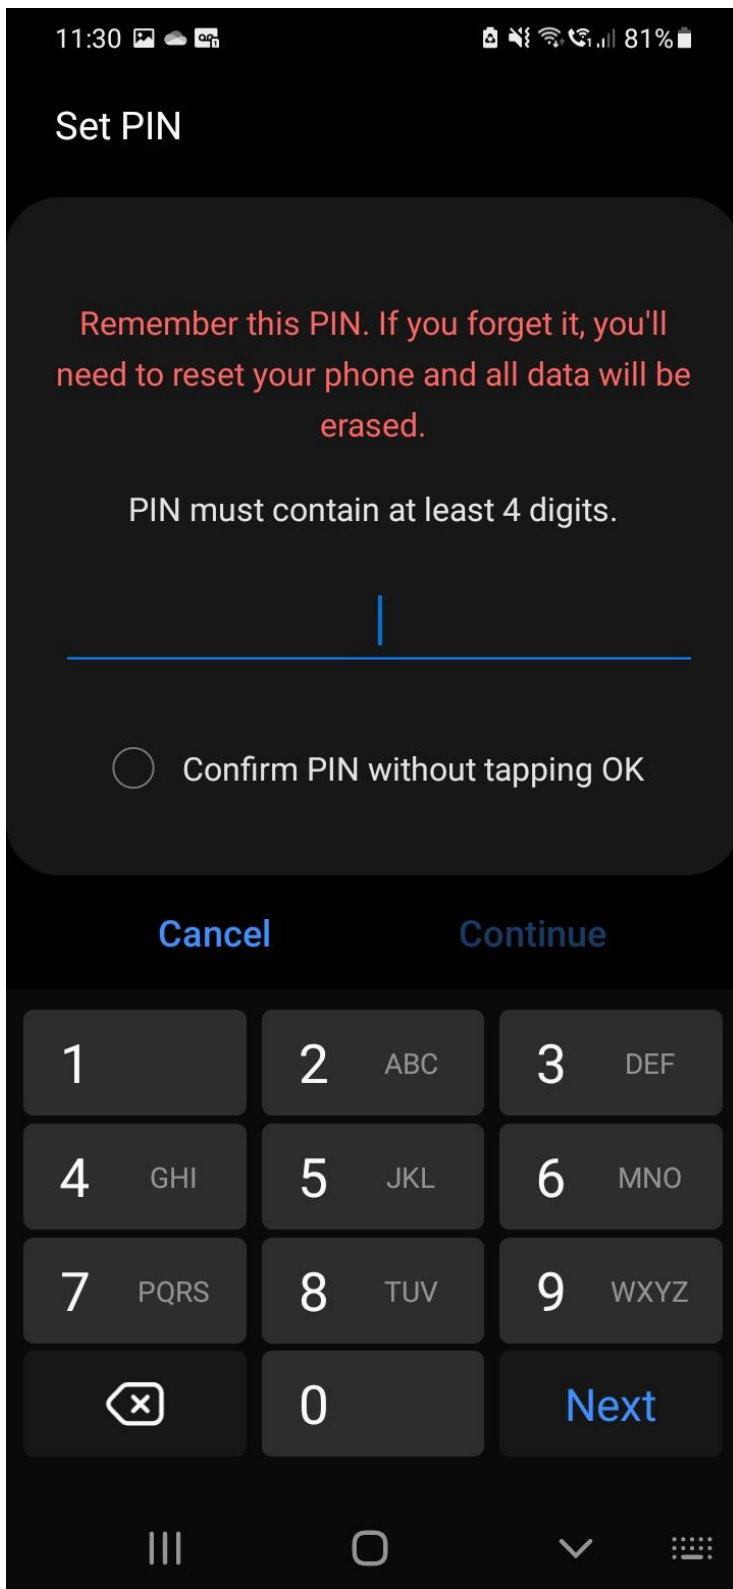

Whatever one you choose, **DO NOT** choose **Swipe** or **None**.

Pattern, PIN and Password will keep your phone secure.

Pattern will lock your phone behind a line drawn between 9 dots on the screen.

Don't worry if you do a slightly different pattern by accident, you will have to **confirm** the pattern before saving.

PIN will lock your phone behind a combination of numbers that is at least 4 digits long.

Once again, don't worry about an error as you will be prompted to **confirm** the PIN before saving.

1 You can add an extra option to lock your
S phone through **Biometrics**, either with a
y **face** or **fingerprint** lock.

Biometrics

Face

Fingerprints

Registered

1

q w e r t y u i o p

Upon selecting these you will have to register your face or fingerprints.

!#

Note that **not all devices have this feature**, so it may not appear on yours.
