

# Mobile Hotspot

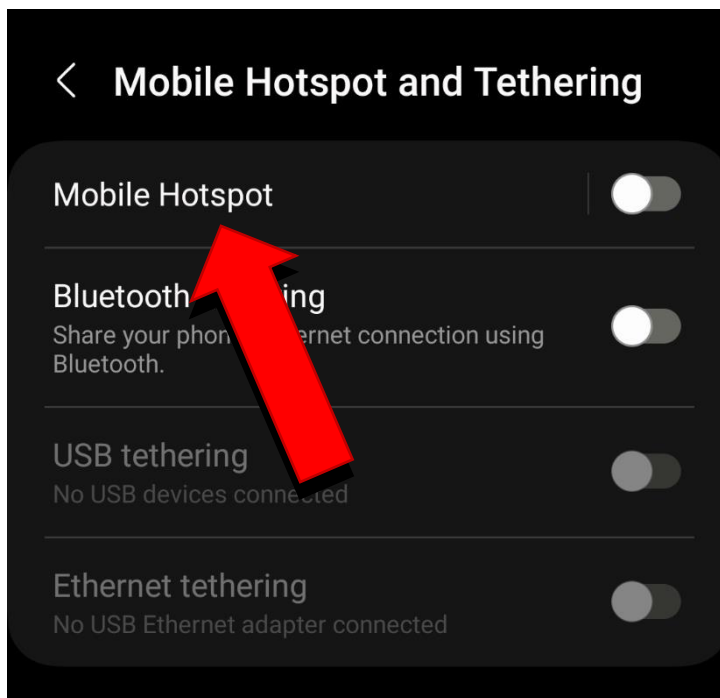

Start by going into your **Settings** app by **tapping** the **grey gear icon**.

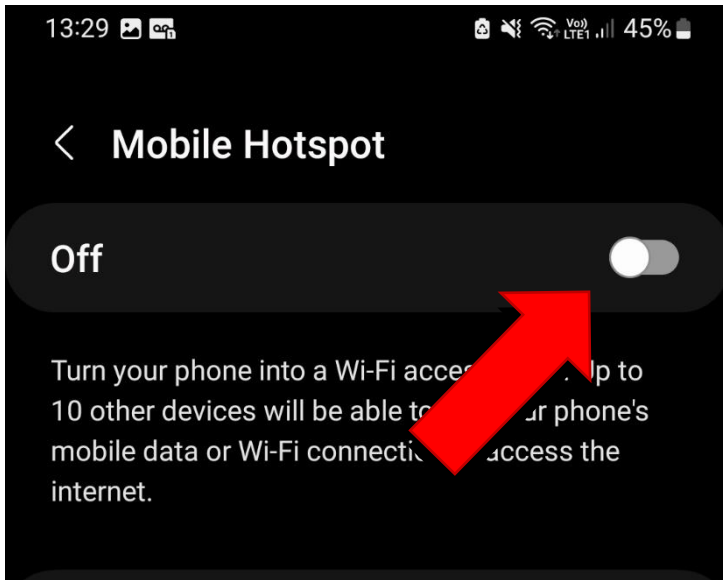

When your list of settings appears, tap on the **first option with an icon**, called **Connections**.

On the first set of options that **do not have any extra buttons**, there will be an option called **Mobile Hotspot and Tethering**, which will be option 4. Tap on this option.

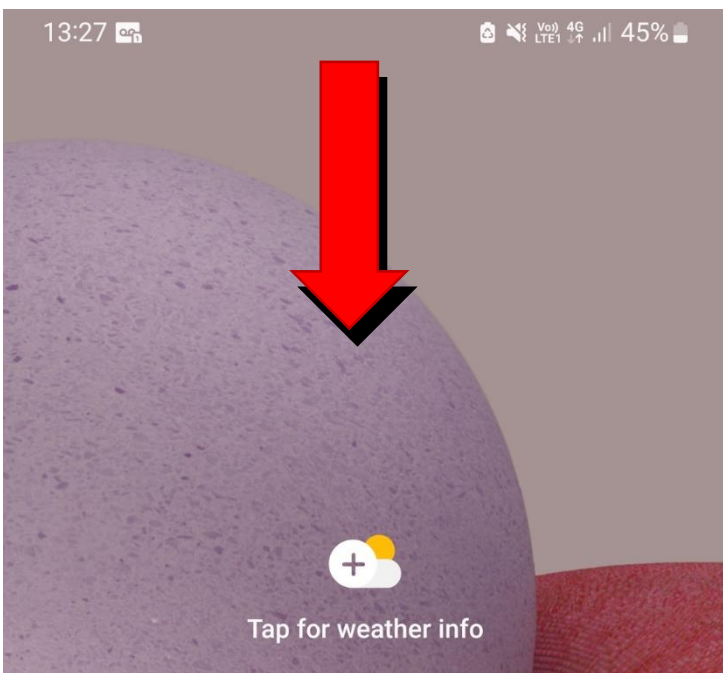

Then, tap on **Mobile Hotspot**

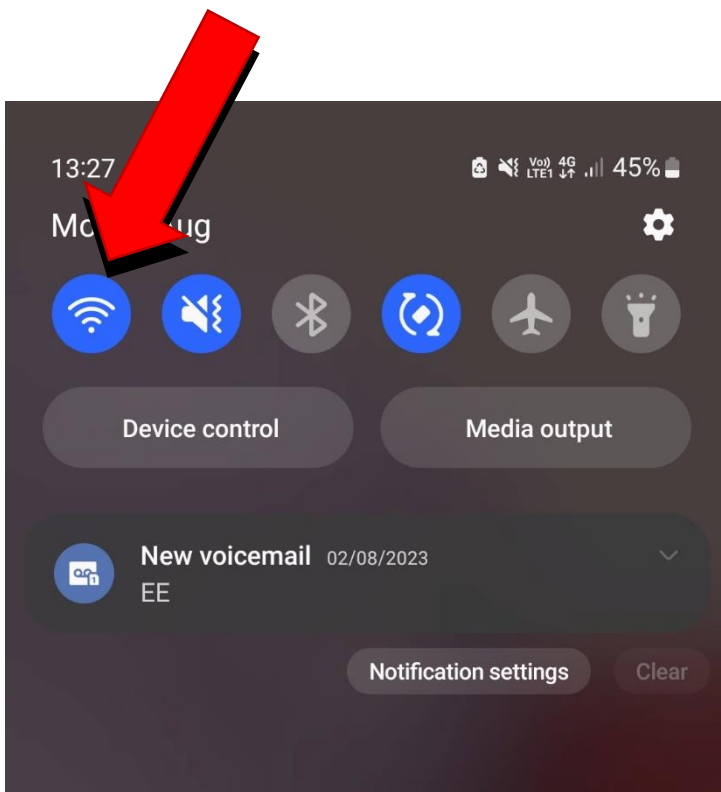

Use the small button at the top right to switch the hotspot on and off. **Blue** is on, **Grey** is off.

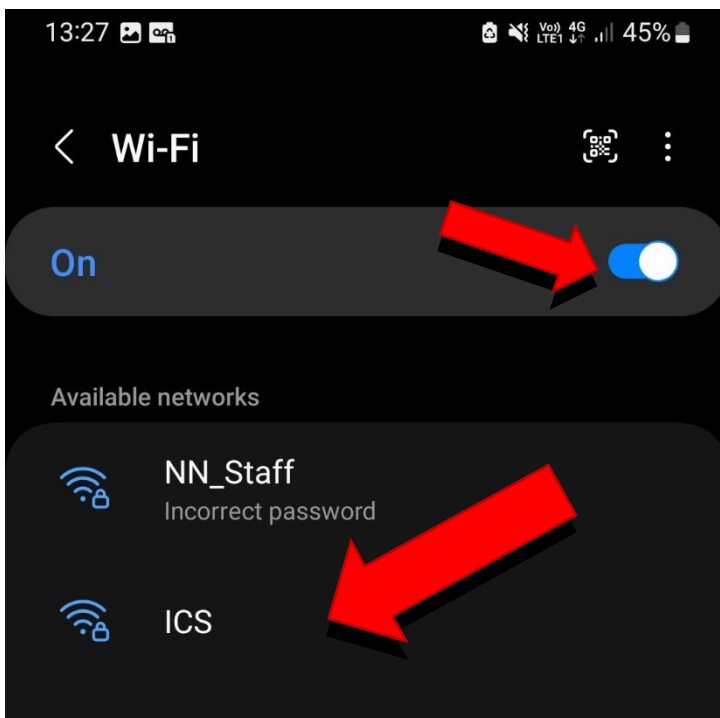

Press **Configure** to change your Network Name and password and keep this screen on.

Now, on your tablet, from the **home screen**, swipe **down** from the **top of the screen** to bring up your notification menu.

When the menu has come down, **tap and hold** on the **Wi-Fi icon**, in the **top left** of the screen.

Make sure Wi-Fi is toggled to **on** and then select the network name that **matches what's on your phone**.

Then, enter the **password that matches what's on your phone**.

If this doesn't work, make sure the details are correct.

When it says '**Connected**', you're good to go! Just keep your phone on and you will have internet on your tablet.
