

Working with multiple browser tabs

Instead of losing your previous search, you can save it for later with a **new tab!**

To open a new tab, **tap the plus** icon at the top of the browser. You can now search for a new page!

To select a tab you have already opened, **tap the number** next to the plus icon, and it will bring up a list of what you have open.

The number shows how many tabs you have open. However, it will display as ':D' if you have 100 or more tabs open, in which case you should consider closing some that you don't need.
